1. SAFETY INFORMATION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

Lead in solder used in this product is listed by the California Health and Welfare agency as a known reproductive toxicant which may cause birth defects or other reproductive harm (California Health & Safety Code, Section 25249.5).

When servicing or handling circuit boards and other components which contain lead in solder, avoid unprotected skin contact with the solder. Also, when soldering do not inhale any smoke or fumes produced.

NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols (fast operating fuse) and/or (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible (fusible de type rapide) et/ou (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

—(FOR USA MODEL ONLY)—

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

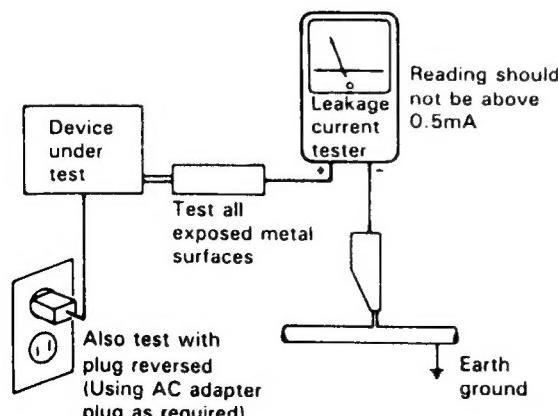

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a Δ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

AC Leakage Test

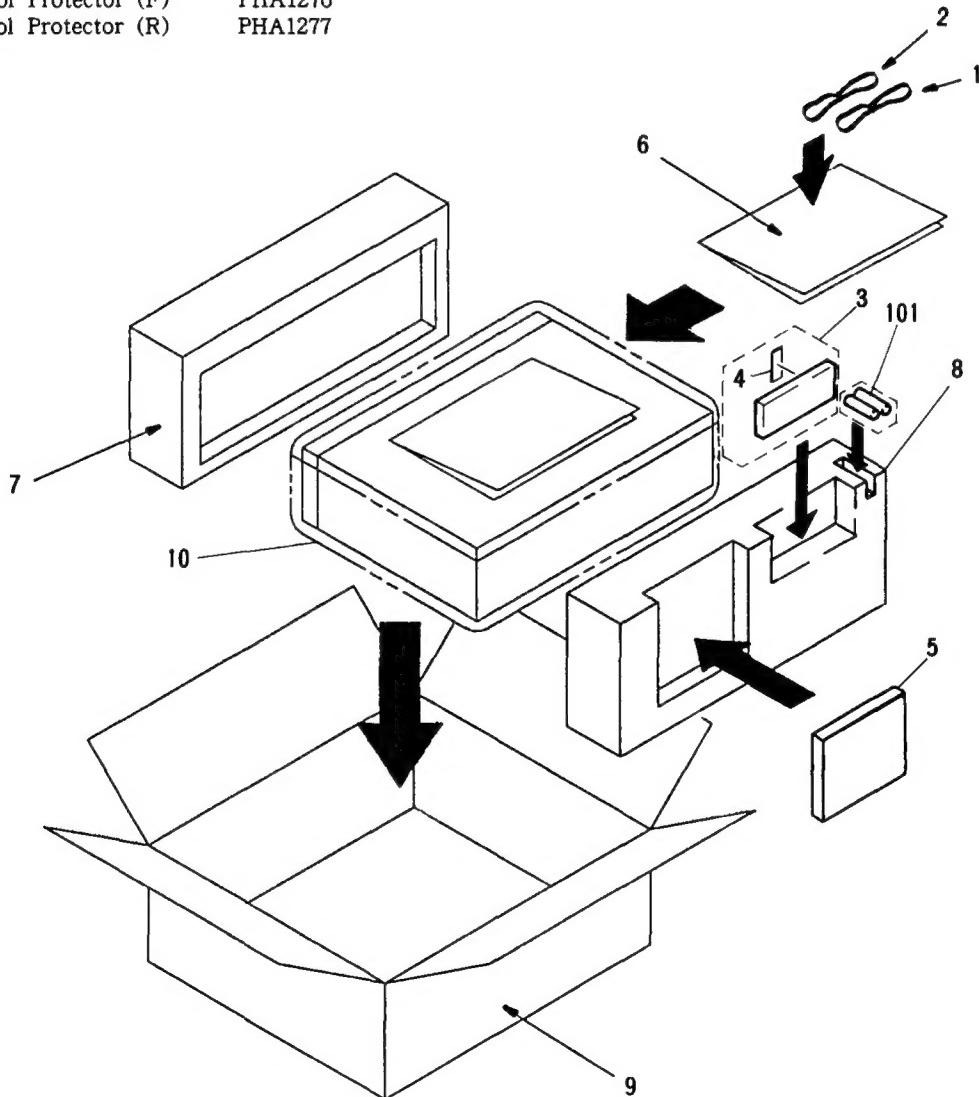

2. PACKING AND PARTS LIST

NOTES:

- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
- The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Parts marked by "◎" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

Parts List

Mark	No.	Description	Part No.	Mark	No.	Description	Part No.
1		Connection Cord with Mini Plug (for SR cord)	PDE - 319		9	CD Packing Case	PHG1999

4. BLOCK DIAGRAM

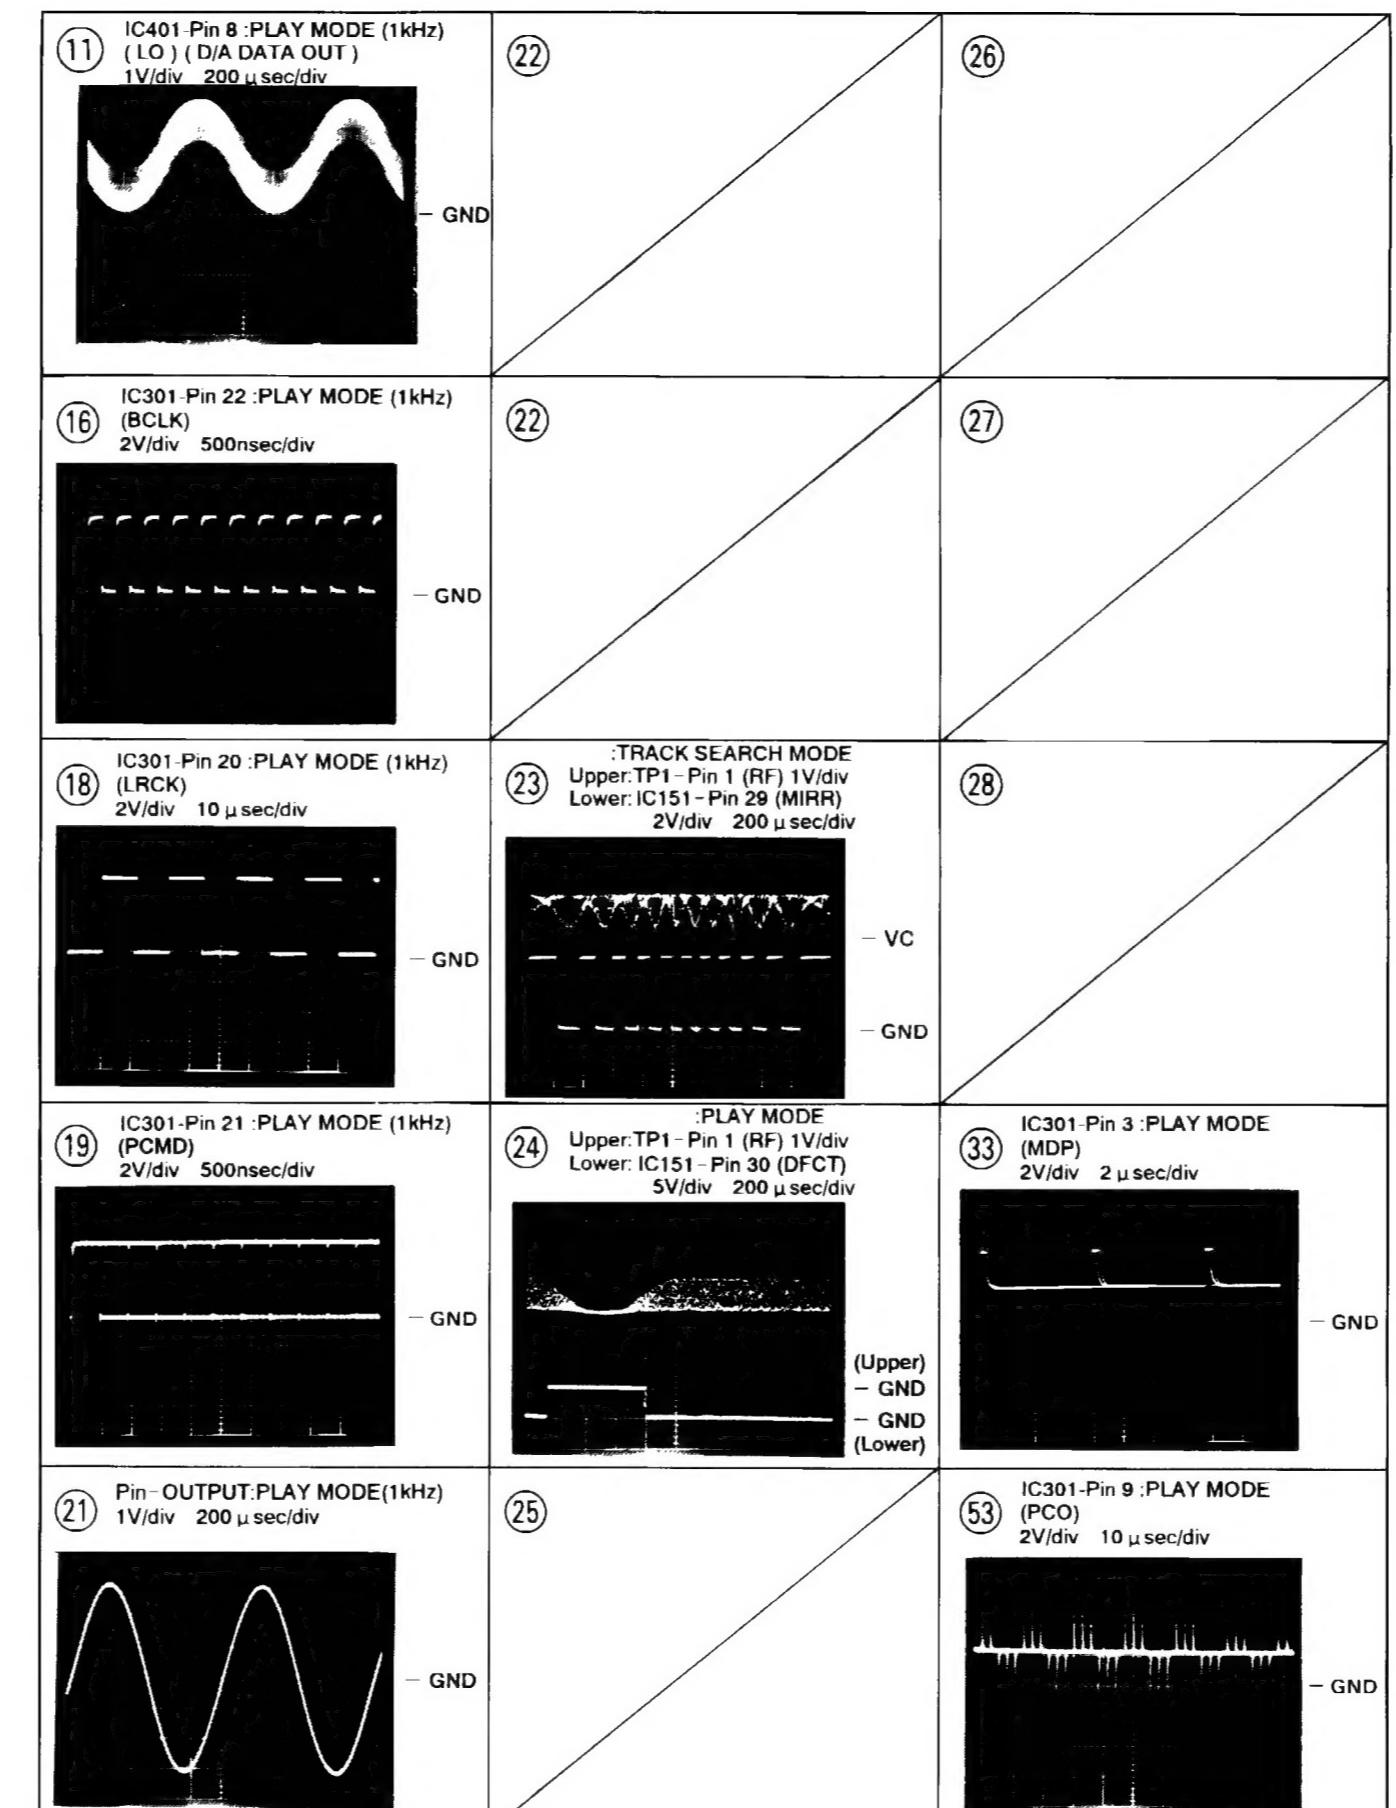

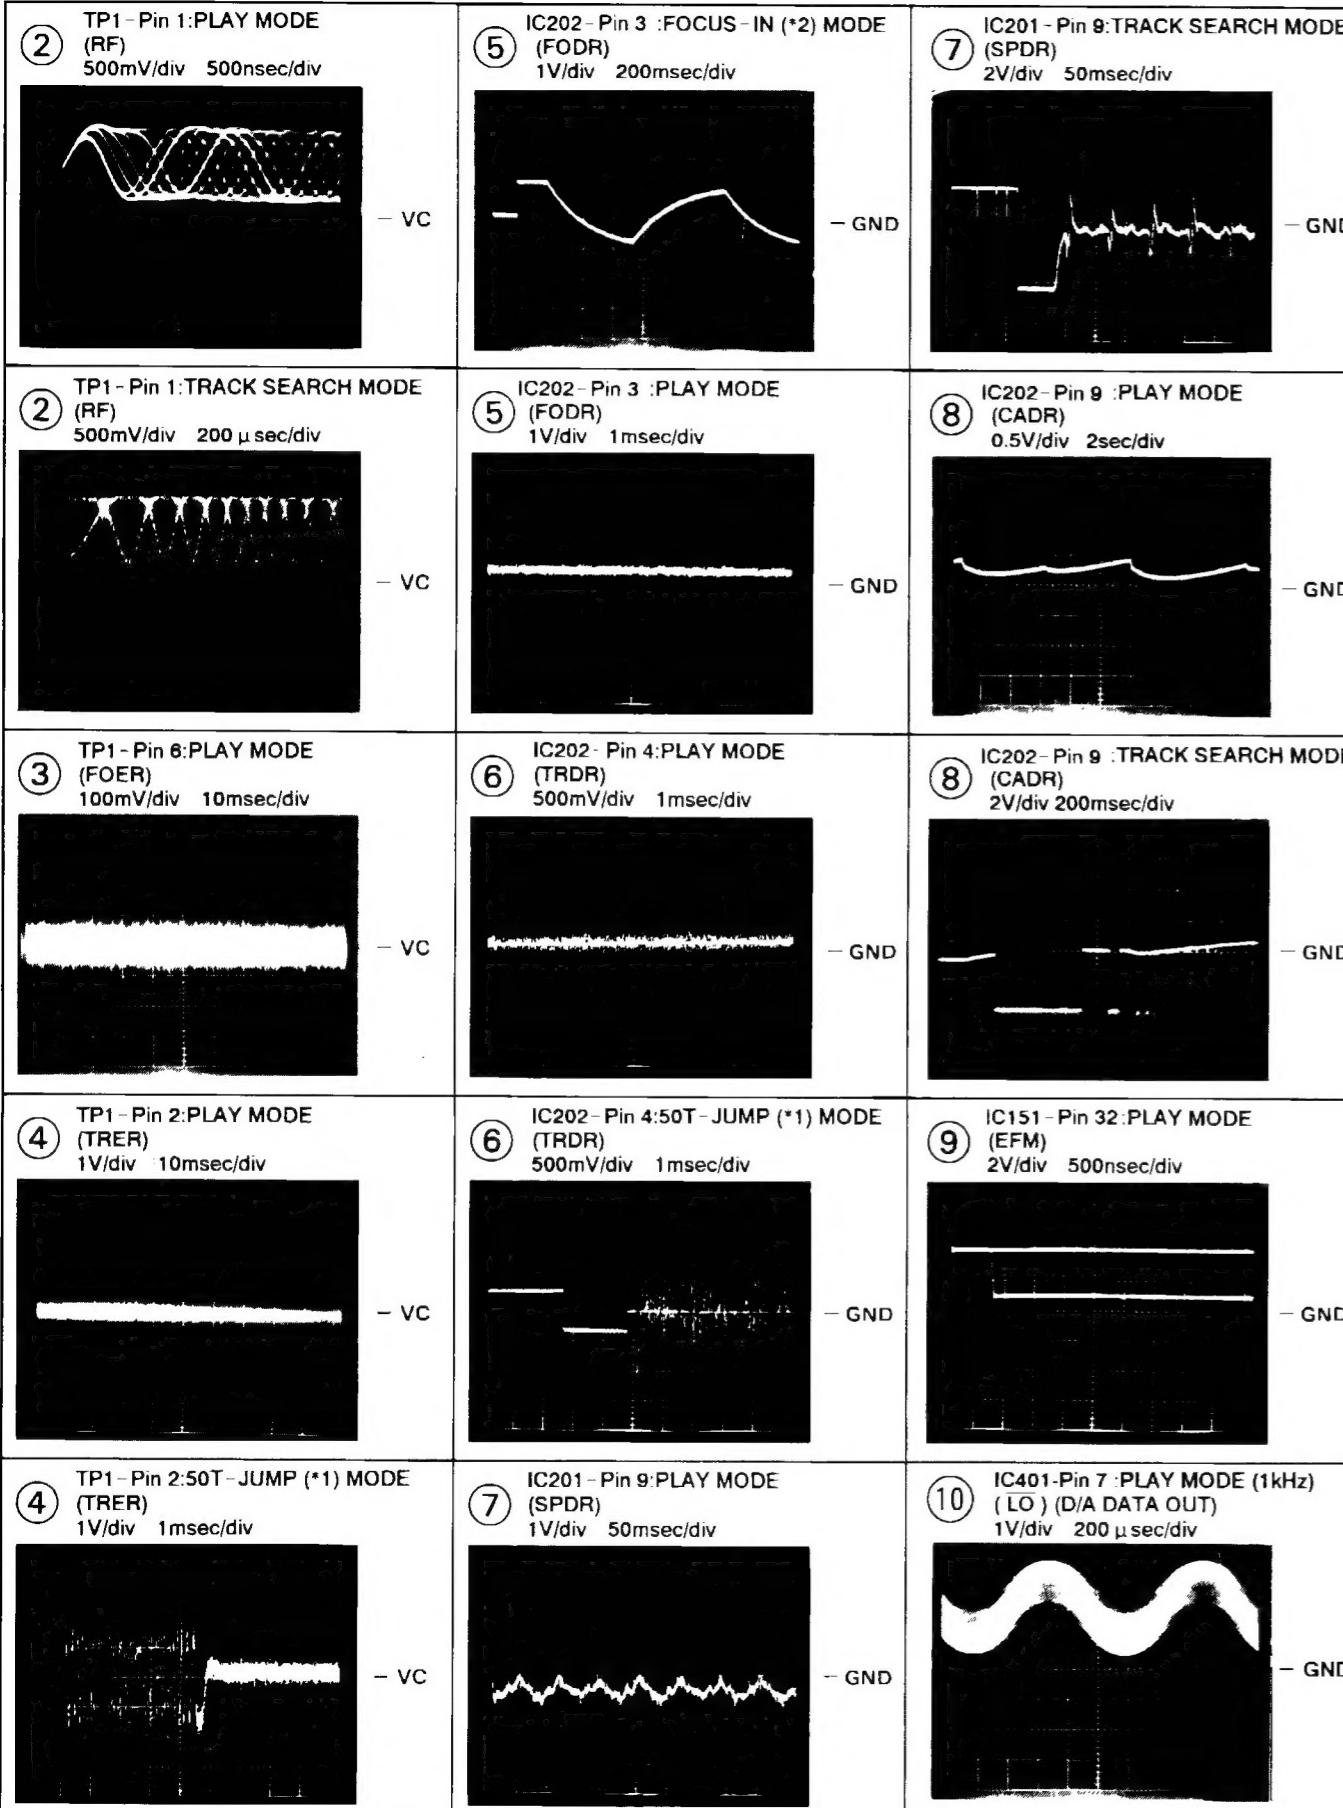

5. SCHEMATIC DIAGRAM

5.1 Waveforms

Note: The encircled numbers denote measuring points in the schematic diagram.

*1 50T-JUMP: After switching to the pause mode, press the manual search key.

*2 FOCUS-IN: Press the key without loading a disc.

NOTE FOR SCHEMATIC DIAGRAMS (Type 4A)

1. When ordering service parts, be sure to refer to "PARTS LIST of EXPLODED VIEWS" or "PCB PARTS LIST".

2. Since these are basic circuits, some parts of them or the values of some components may be changed for improvement.

3. RESISTORS:

Unit: k:kΩ, M:MΩ, or Ω unless otherwise noted.
Rated power: 1/4W, 1/6W, 1/8W, 1/10W unless otherwise noted.
Tolerance: (F): ±1%, (G): ±2%, (K): ±10%, (M): ±20% or ±5% unless otherwise noted.

4. CAPACITORS:

Unit: p:pF or μμF unless otherwise noted.
Ratings: capacitor (μF)/ voltage (V) unless otherwise noted.
Rated voltage: 50V except for electrolytic capacitors.

5. COILS:

Unit: m:mH or μH unless otherwise noted.

6. VOLTAGE AND CURRENT:

or V : DC voltage (V) in PLAY mode unless otherwise noted.
△ mA or mA : DC current in PLAY mode unless otherwise noted.
Value in () is DC current in STOP mode.

7. OTHERS:

- : Adjusting point.
- : Measurement point.
- The mark found on some component parts indicates the importance of the safety factor of the parts. Therefore, when replacing, be sure to use parts of identical designation.

8. SCH-□ ON THE SCHEMATIC DIAGRAM:

- SCH-□ indicates the drawing number of the schematic diagram. (SCH stands for schematic diagram.)

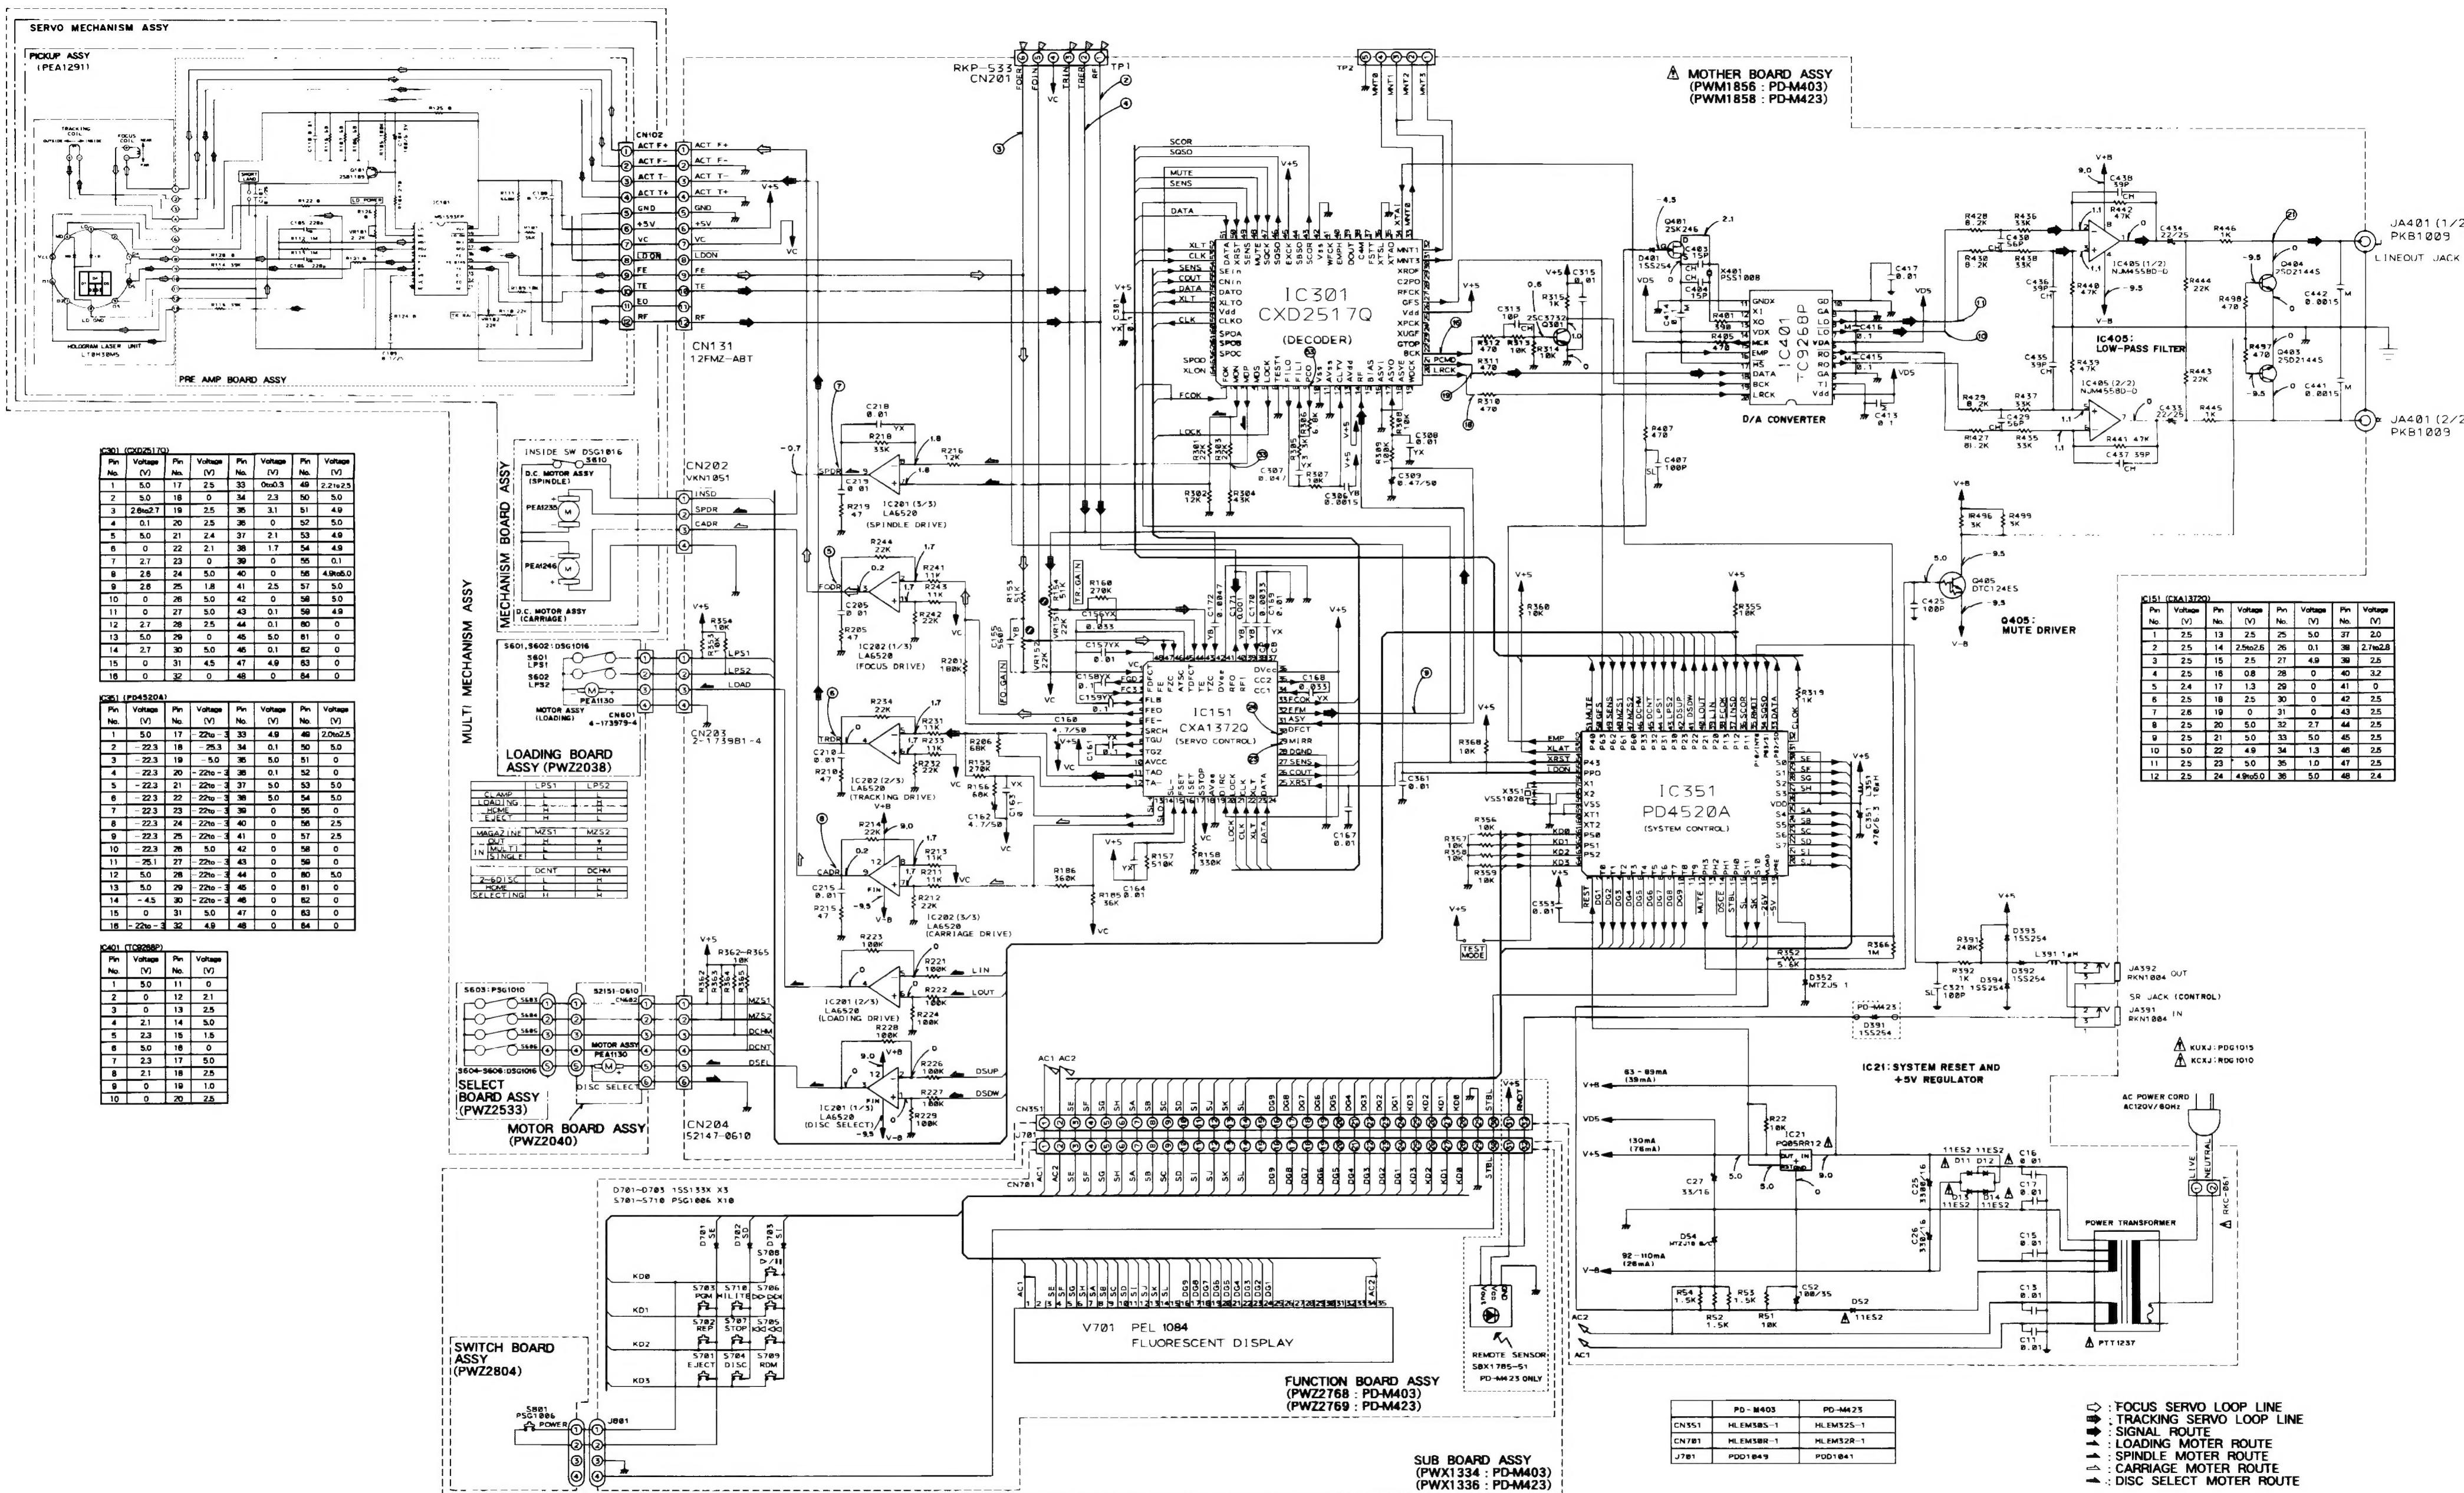

9. SWITCHES (Underline indicates switch position):

FUNCTION BOARD ASSY

7. PCB PARTS LIST

NOTES:

- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Parts marked by "○" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.
- When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

560Ω	$\rightarrow 56 \times 10^1 \rightarrow 561$	RD1/8PM [5] [6] [1] J
$47k \Omega$	$\rightarrow 47 \times 10^3 \rightarrow 473$	RD1/4PS [4] [7] [3] J
0.5Ω	$\rightarrow 0R5$	RN2H [0] [R] [5] K
1Ω	$\rightarrow 010$	RS1P [0] [1] [0] K

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

$5.62k \Omega \rightarrow 562 \times 10^3 \rightarrow 5621$	RN1/4PC [5] [6] [2] [1] F

8. ADJUSTMENTS

8.1. Adjustment Methods

If a disc player is adjusted incorrectly or inadequately, it may malfunction or not work at all even though there is nothing at all wrong with the pickup or the circuitry. Adjust correctly following the adjustment procedure.

● Adjustment Items/Verification Items and Order

If the specified values cannot be obtained or no adjustment is possible by performing the verifications or adjustments described in steps 1 – 4, the pickup block may be defective.

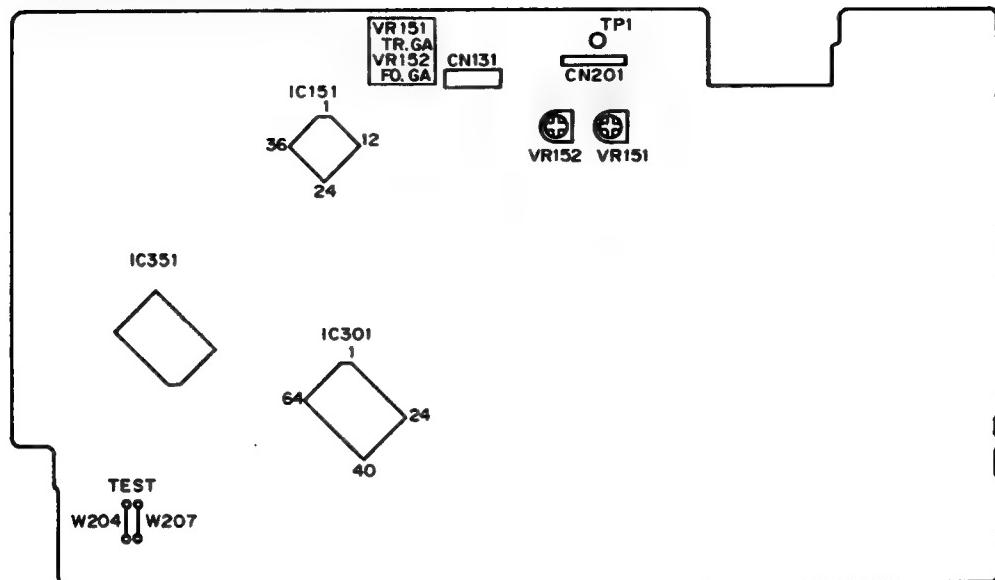

Step	Item	Test Point	Adjustment Location
1	Focus offset verification	TP1, Pin 6(FCS. ERR)	None
2	Tracking error balance verification	TP1, Pin 2(TRK. ERR)	None
3	Pickup radial/tangential direction tilt adjustment	TP1, Pin 1(RF)	Radial tilt adjustment screw, Tangential tilt adjustment screw
4	RF level verification	TP1, Pin 1(RF)	None
5	Focus servo loop gain adjustment	TP1, Pin 5(FCS. IN) TP1, Pin 6(FCS. ERR)	VR152(FCS. GAN)
6	Tracking servo loop gain adjustment	TP1, Pin 3(TRK. IN) TP1, Pin 2(TRK. ERR)	VR151(TRK. GAN)

● Abbreviation table

FCS. ERR	:Focus Error
TRK. ERR	:Tracking Error
FCS. GAN	:Focus Gain
TRK. GAN	:Tracking Gain
FCS. IN	:Focus In
TRK. IN	:Tracking In

● Measuring Instruments and Tools

1. Dual trace oscilloscope (10:1 probe)
2. Low-frequency oscillator
3. Test disc (YEDS - 7)
4. Low pass filter ($39k\Omega +0.001\mu F$)
5. Resistor ($100k\Omega$)
6. Standard tools

● Test Point and Adjustment Variable Resistor Positions**MOTHER BOARD ASSY****Figure 1. Adjustment Locations****● Notes**

1. Use a 10:1 probe for the oscilloscope.
2. All the knob positions (settings) for the oscilloscope in the adjustment procedures are for when a 10:1 probe is used.

● Test Mode

These models have a test mode so that the adjustments and checks required for service can be carried out easily. When these models are in test mode, the keys on the front panel work differently from normal. Adjustments and checks can be carried out by operating these keys with the correct procedure. For these models, all adjustments are carried out in test mode.

[Setting these models to test mode]

How to set this model into test mode.

1. Unplug the power cord from the AC socket.
2. Short the test mode jumper wires. (See Figure 1.)
3. Plug the power cord back into the AC socket.

When the test mode is set correctly, the display is different from what it usually is when the power is turned on. If the display is still the same as usual, test mode has not been set correctly, so repeat Steps 1 – 3.

[Release from test mode]

Here is the procedure for releasing the test mode:

1. Press the STOP key and stop all operations.
2. Unplug the power cord from the AC socket.

[Operations of the keys in test mode]

Code	Key Name	Function in Test Mode	Explanation
	PGM (PROGRAM)	Focus servo close	<p>The laser diode is lit up and the focus actuator is lifted up, then lowered slowly and the focus servo is closed at the point where the objective lens is focused on the disc. With the player in this state, if you lightly rotate the stopped disc by hand, you can hear the sound the focus servo.</p> <p>If you can hear this sound, the focus servo is operating correctly. If you press this key with no disc mounted, the laser diode lights up, the focus actuator is pulled up, then the actuator is lowered and raised three times and returned to its original position.</p>
▷/	PLAY/PAUSE	Spindle servo ON	<p>Starts the spindle motor in the clockwise direction and when the disc rotation reaches the prescribed speed (about 500 rpm at the inner periphery), sets the spindle servo in a closed loop.</p> <p>Be careful. Pressing this key when there is no disc mounted makes the spindle motor run at the maximum speed.</p> <p>If the focus servo does not go correctly into a closed loop or the laser light shines on the mirror section at the outermost periphery of the disc, the same symptom is occurred.</p>
		Tracking servo close/open	<p>Pressing this key when the focus servo and spindle servo are operating correctly in closed loops puts the tracking servo into a closed loop, displays the track number being played back and the elapsed time on the front panel, and outputs the playback signal.</p> <p>If the elapsed time is not displayed or not counted correctly or the audio is not played back correctly, it may be that the laser is shining on the section with no sound recorded at the outer edge of the disc, that something is out of adjustment, or that there is some other problem.</p> <p>This key is a toggle key and open/close the tracking servo alternately. This key has no effect if no disc is mounted.</p>

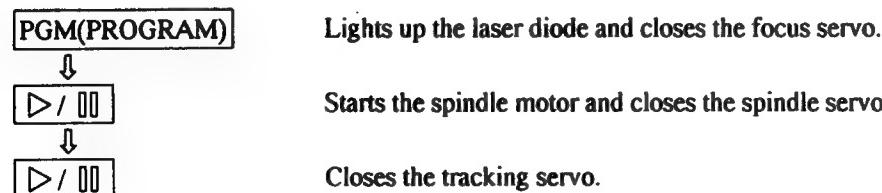

Code	Key Name	Function In Test Mode	Explanation
◀◀ · ◀◀	TRACK / MANUAL SEARCH REV	Carriage reverse (inwards)	Moves the pickup position toward the inner diameter of the disc. When this key is pressed with the tracking servo in a closed loop, the tracking servo automatically goes into an open loop. Since the motor does not automatically stop at the mechanical end point in test mode, be careful with this operation.
▶▶ · ▶▶	TRACK / MANUAL SEARCH FWD	Carriage forward (outwards)	Moves the pickup position toward the outer diameter of the disc. When this key is pressed with the tracking servo in a closed loop, the tracking servo automatically goes into an open loop. Since the motor does not automatically stop at the mechanical end point in test mode, be careful with this operation.
□	STOP	Stop	Initializes and the disc rotation stops. The pickup and disc remain where they are when this key is pressed.
△	EJECT	CD magazine eject	Stores Disc 1 in the CD magazine, then ejects the CD magazine. However, even though the CD magazine is ejected, the pickup does not return to the park position. Even if the CD magazine is mounted again, the pickup remains where it is.

Note : When inserting the magazine, disc 1 of the magazine is loaded automatically.

[How to play back a disc in test mode]

In test mode, since the servos operate independently, playing back a disc requires that you operate the keys in the correct order to close the servos.

Here is the key operation sequence for playing back a disc in test mode.

Wait at least 2-3 seconds between each of these operations.

1. Focus Offset Verification

● Objective	Verify the DC offset for the focus error amp.		
● Symptom when out of adjustment	The model does not focus in and the RF signal is dirty.		
● Measurement instrument connections	Connect the oscilloscope to TP1, Pin 6 (FCS. ERR) [Settings] 5 mV/division 10 ms/division DC mode	● Player state ● Adjustment location ● Disc	Test mode, stopped (just the Power switch on) None None needed
[Procedure]			
Verify the DC voltage at TP1, Pin 6 (FCS. ERR) is 0 ± 50 mV.			

Note : If the specified values cannot be obtained or no adjustment is possible by performing the verifications or adjustments described in adjustment items 1 – 4, the pickup block may be defective.

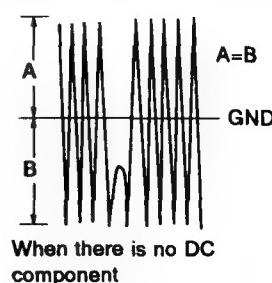

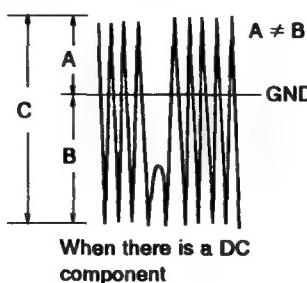

2. Tracking Error Balance Verification

● Objective	To verify that there is no variation in the sensitivity of the tracking photo diode.		
● Symptom when out of adjustment	Play does not start or track search is impossible.		
● Measurement instrument connections	Connect the oscilloscope to TP1, Pin 2 (TRK. ERR). This connection may be via a low pass filter. [Settings] 50 mV/division 5 ms/division DC mode	● Player state ● Adjustment location ● Disc	Test mode, focus and spindle servos closed and tracking servo open None YEDS-7
[Procedure]			

1. Move the pickup to midway across the disc ($R=35$ mm) with the TRACK/MANUAL SEARCH FWD \gg • \gg key or REV \ll • \ll key.
2. Press the PGM (PROGRAM) key, then the PLAY/PAUSE \triangleright / \square key in that order to close the focus servo then the spindle servo.
3. Line up the bright line (ground) at the center of the oscilloscope screen and put the oscilloscope into DC mode.
4. Supposing that the positive amplitude of the tracking error signal at TP1, pin 2 (TRK. ERR) is (A) and the negative amplitude is (B), the following expression is satisfied.

$$\text{When } A \geq B, \frac{A-B}{C} \times \frac{1}{2} \leq 0.1$$

$$\text{When } A < B, \frac{B-A}{C} \times \frac{1}{2} \leq 0.1$$

3. Pickup Radial/Tangential Tilt Adjustment

● Objective	To adjust the angle of the pickup relative to the disc so that the laser beams are shone straight down into the disc for the best read out of the RF signals.		
● Symptom when out of adjustment	Sound broken; some discs can be played but not others.		
● Measurement instrument connections	<p>Connect the oscilloscope to TP1, Pin 1 (RF).</p> <p>[Settings] 20 mV/division 200 ns/division AC mode</p>	<ul style="list-style-type: none"> ● Player state: ● Adjustment location ● Disc 	<p>Test mode, play</p> <p>Pickup radial tilt adjustment screw and tangential tilt adjustment screw</p> <p>YEDS-7</p>

[Procedure]

1. Press the TRACK / MANUAL SEARCH FWD $\triangleright\triangleright$ • $\triangleright\triangleright$ or REV $\triangleleft\triangleleft$ • $\triangleleft\triangleleft$ key to move the pickup to halfway across the disc ($R=35mm$).
Press the PGM (PROGRAM) key, the PLAY/PAUSE \triangleright / $\square\square$ key twice in that order to close the respective servos and put the player into play mode.
2. First, adjust the radial tilt adjustment screw with a Phillips screwdriver so that the eye pattern (the diamond shape at the center of the RF signal) can be seen the most clearly.
3. Next, adjust the tangential tilt adjustment screw with a Phillips screwdriver so that the eye pattern (the diamond shape at the center of the RF signal) can be seen the most clearly (Figure 3).
4. Adjust the radial tilt adjustment screw and the tangential tilt adjustment screw again so that the eye pattern can be seen the most clearly. As necessary, adjust the two screws alternately so that the eye pattern can be seen the most clearly.
5. When the adjustment is completed, lock the radial and tangential adjustment screw.

Note: Radial and tangential mean the directions relative to the disc shown in Figure 2.

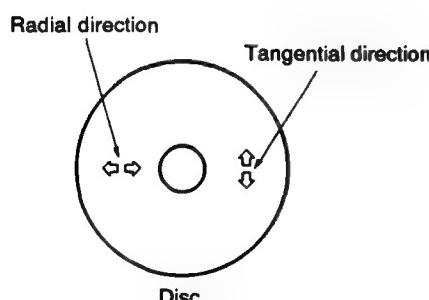

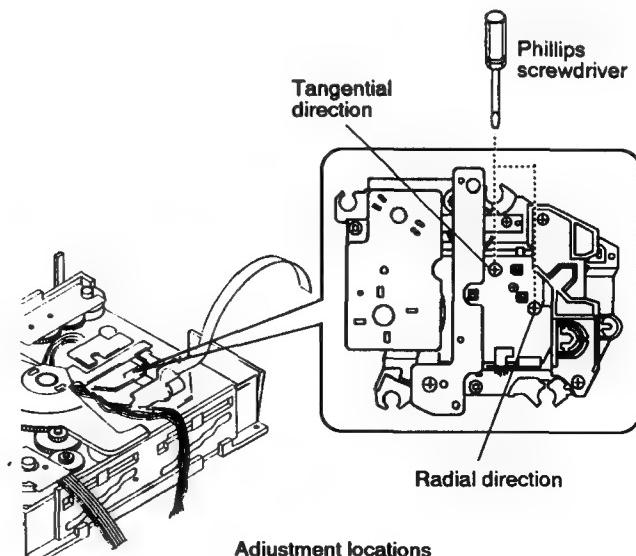

Figure 2

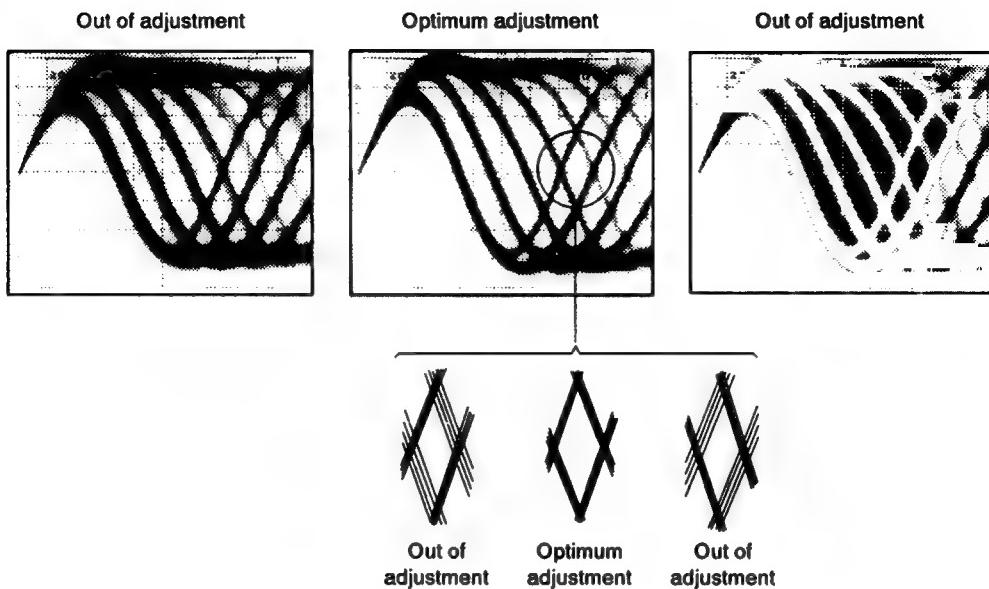

Figure 3. Eye pattern

4. RF Level Verification

● Objective	To verify the playback RF signal amplitude		
● Symptom when out of adjustment	No play or no search		
● Measurement instrument connections	Connect the oscilloscope to TP1, Pin 1 (RF). [Settings] 50 mV/division 10 ms/division AC mode	● Player state ● Adjustment location ● Disc	Test mode, play None YEDS-7

[Procedure]

1. Move the pickup to midway across the disc ($R=35$ mm) with the TRACK/MANUAL SEARCH FWD \gg • $\gg\gg$ or REV \ll • $\ll\ll$ key, then press the PGM (PROGRAM) key, the PLAY/PAUSE \triangleright / \square key twice in that order to close the respective servos and put the player into play mode.
2. Verify the RF signal amplitude is $1.2 \text{ Vp-p} \pm 0.2 \text{ V}$.

5. Focus Servo Loop Gain Adjustment

● Objective	To optimize the focus servo loop gain.		
● Symptom when out of adjustment	Playback does not start or focus actuator noisy.		
● Measurement instrument connections	See figure 4. [Settings] CH1 CH2 20 mV/division 5 mV/division X - Y mode	● Player state ● Adjustment location ● Disc	Test mode, play VR152 (FCS. GAN) YEDS-7

[Procedure]

1. Set the AF generator output to 1.2 kHz and 1 Vp-p.
2. Press the TRACK/MANUAL SEARCH FWD $\gg\gg$ or REV $\ll\ll$ key to move the pickup to halfway across the disc ($R=35$ mm), then press the PGM (PROGRAM) key, the PLAY/PAUSE $\triangleright / \square\square$ key twice in that order to close the corresponding servos and put the player into play mode.
3. Adjust VR152 (FCS. GAN) so that the Lissajous waveform is symmetrical about the X axis and the Y axis.

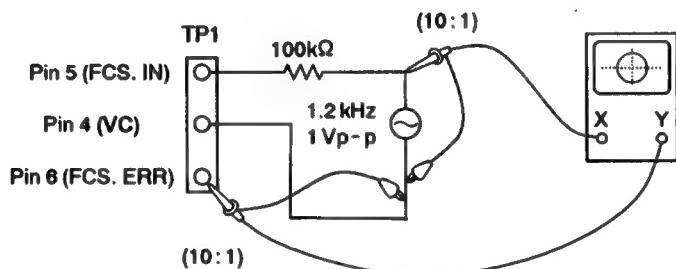

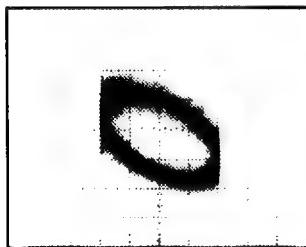

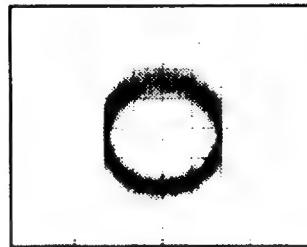

Figure 4

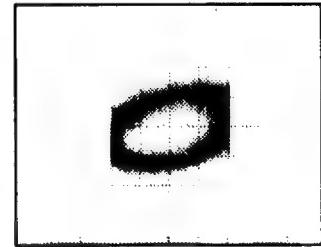

Focus Gain Adjustment

Higher gain

Optimum gain

Lower gain

6. Tracking Servo Loop Gain Adjustment

● Objective	To optimize the tracking servo loop gain.		
● Symptom when out of adjustment	Playback does not start, during searches the actuator is noisy, or tracks are skipped.		
● Measurement instrument connections	See Figure 5. [Settings] CH1 CH2 50 mV/division 20 mV/division X-Y mode	<ul style="list-style-type: none"> ● Player state ● Adjustment location ● Disc 	Test mode, play VR151 (TRK. GAN) YEDS-7

[Procedure]

1. Set the AF generator output to 1.2 kHz and 2 Vp-p.
2. Press the TRACK/MANUAL SEARCH FWD \gg • \gg or REV \ll • \ll key to move the pickup to halfway across the disc ($R=35$ mm), then press the PGM (PROGRAM) key, the PLAY/PAUSE \triangleright / \ll key twice in that order to close the corresponding servos and put the player into play mode.
3. Adjust VR151 (TRK. GAN) so that the Lissajous waveform is symmetrical about the X axis and the Y axis.

● Pin Functions

Pin No.	Symbol	I/O	Function
1	VDD	-	Power supply pin of digital section.
2	T1	I	Test pin. Normally "L".
3	GNDA	-	Ground pin of analog section for R channel.
4	RO	O	R channel data normal output pin.
5	R̄O	O	R channel data inversion output pin.
6	VDA	-	Power supply pin of analog section.
7	LO	O	L channel data inversion output pin.
8	LO	O	L channel data normal output pin.
9	GNDA	-	Ground pin of analog section for L channel.
10	GNDD	-	Ground pin of digital section.
11	GNDX	-	Ground pin of crystal oscillation section.
12	XI	I	Connected to crystal oscillator. Generates clock required for the system.
13	XO	O	
14	VDX	-	Power supply pin of crystal oscillation section.
15	MCK	O	System clock output pin.
16	EMP	I	De-emphasis filter control pin. De-emphasis filter on at "H". De-emphasis filter off at "L".
17	HS	I	Normal speed/ ×2 speed selection pin. "H": Normal speed, "L": ×2 speed.
18	DATA	I	Data input pin.
19	BCK	I	Bit clock input pin.
20	LRCK	I	LR clock input pin.

13. SPECIFICATIONS

General

Type	Compact disc digital audio system
Power requirements	
U.S. model	AC 120 V, 60 Hz
U.K. and Australian models	AC 220-240 V, 50/60Hz
Power consumption	
U.S. model	10 W
U.K. and Australian models	12 W
Operating temperature	+5°C-+35°C (+41°F- +95°F)
Weight (without package)	3.7 kg (8 lb, 3 oz)
External dimensions	420(W) x 294 (D) x 105 (H) mm 16-9/16 (W) x 11-9/16 (D) x 4-1/8 (H) in

Audio section

Frequency response	2 Hz - 20 kHz
S/N ratio	98dB or more (EIAJ)
Dynamic range	95dB or more (EIAJ)
Harmonic distortion	0.005% or less (EIAJ)
Output voltage	2.0 V
Wow and flutter	Limit of measurement (0.001% W.PEAK) or less (EIAJ)
Channels	2-channel (stereo)

Output terminal

Audio line output	
Control input/output jacks	(Except for PD-M423 of Australian model.)

Accessories

• Remote control unit (PD-M423 only)	1
• Size AAA/R03 dry batteries (PD-M423 only)	2
• Six-compact-disc magazine	1
• Control cable (Except for PD-M423 of Australian model)	1
• Output cable	1
• Operating instructions	1

Specifications and design subject to possible modification without notice, due to improvements.

The Magazine Type Multi-Play CD Players with  mark and the Magazines with the same mark are compatible for 5 inch (12 cm) discs.

Additional Laser Caution

1. **Laser Interlock Mechanism**
The ON/OFF (ON : low level, OFF : high level) status of S601 (LPS1) and S602 (LPS2) switches for detecting the loading state is detected by the system microprocessor, and the design prevents laser diode oscillation except when both switches S601 and S602 are ON (low level or clamped state). Thus, interlock will no longer function if switches S601 (LPS1) and S602 (LPS2) are deliberately shorted (low level). The interlock also does not function in the test mode *. Laser diode oscillation will continue, if pin 1 of M51593FP (IC101) on the PRE AMP BOARD ASSY mounted on the pickup assembly is connected to GND, or pin 19 is connected to low level (ON), or else the terminals of Q101 are shorted to each other (fault condition).
2. When the cover is opened with the servo mechanism block removed and turned over, close viewing of the objective lens with the naked eye will cause exposure to a Class 1 laser beam.

* Refer to page 26 on the service manual RRV1062.

EXPLoded VIEWS

MOTHER BOARD ASSY

WM1896, PWM1895 and PWM1858 have the same construction except for the following :

Mark	Symbol & Description	Part No.			Remarks
		PWM1858	PWM1896	PWM1895	
IC31	Jumper	ICP-N10	ICP-N10	* 2	
D391	1SS254	Not Used	Not Used		
D392 - D394	1SS254	Not Used	1SS254		
L351	LAU100K	LAU100J	LAU100J		
L391	LAU010K	Not Used	LAU010J		
C29, C302	Not Used	CFTYA104J50	CFTYA104J50	* 2	
C321	CCCSL101J50	Not Used	CCCSL101J50		
C410	Not Used	CCCSL101J50	CCCSL101J50	* 2	
R316	Not Used	RD1/6PM471J	RD1/6PM471J	* 2	
R351	Not Used	RD1/6PM471J	RD1/6PM471J	* 2	
R391	RD1/6PM244J	Not Used	RD1/6PM244J		
R392	RD1/6PM102J	Not Used	RD1/6PM102J		
CN351 (Connector 32P)	9604S - 32C	9604S - 32C	Not Used		
CN351 (Connector 30P)	Not Used	Not Used	9604S - 30C		
JA391, JA392	RKN1004	Not Used	RKN1004		

Note : * 2 : Refer to " 3. SCHEMATIC DIAGRAM " and " 4. PCB DIAGRAM ".

FUNCTION BOARD ASSY

WZ2768 and PWZ2769 have the same construction except for the following :

Mark	Symbol & Description	Part No.		Remarks
		PWZ2769	PWZ2768	
	CN701 (Connector 32P) CN701 (Connector 30P) Remote Sensor	9607 - 32F Not Used SBX1785 - 51	Not Used 9607S - 30F Not Used	

SWITCH BOARD ASSY

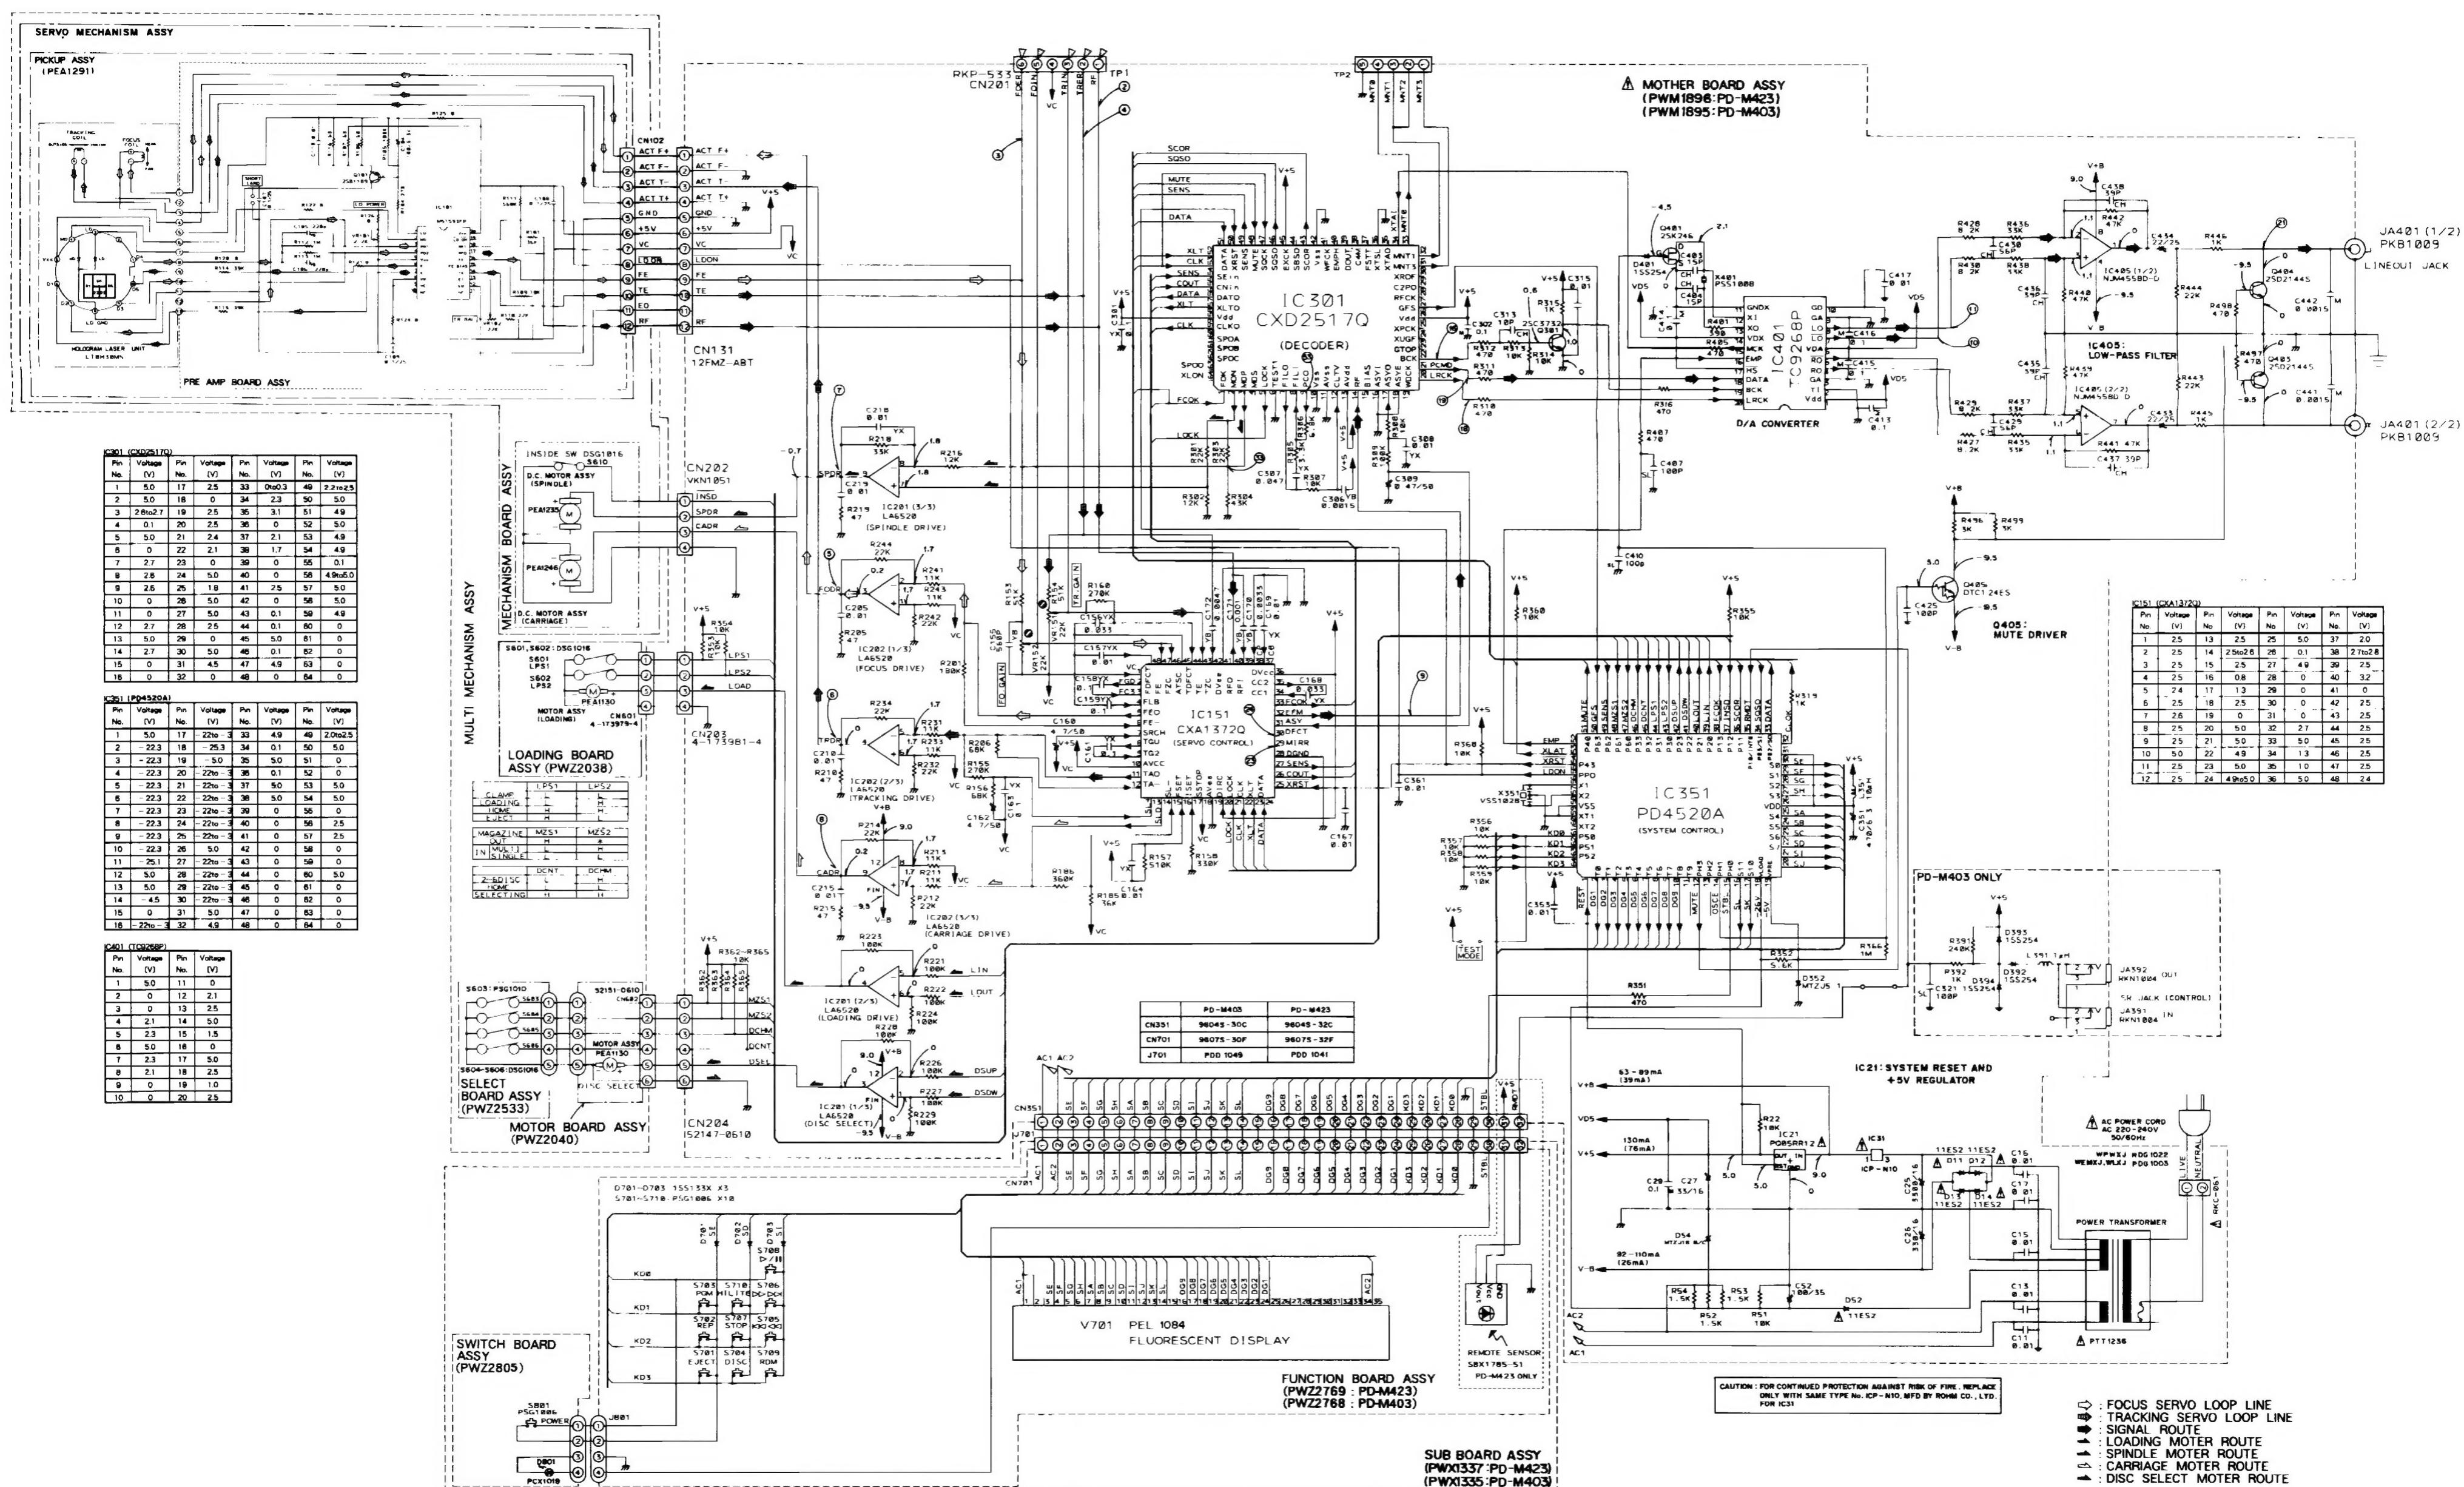

WZ2805 and PWZ2804 have the same construction except for the following:

Mark	Symbol & Description	Part No.		Remarks
		PWZ2804	PWZ2805	
D801		Not Used	PCX1019	*2

Note : * 2 : Refer to " 3. SCHEMATIC DIAGRAM " and " 4. PCB DIAGRAM "

3. SCHEMATIC DIAGRAM

A

- This diagram is viewed from the mounted parts side.

•

	PD-M423	PD-M403
CN351	9604S - 32C	9604S - 30C
CN701	9607S - 32F	9607S - 30F

* 2 : PD-M423 ONL

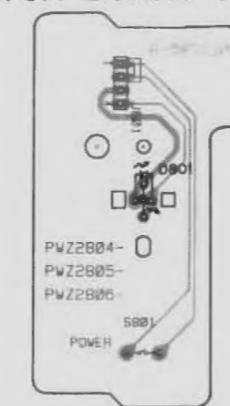

* 3 : PD-M403 ONL

NOTE FOR PCB DIAGRAMS:

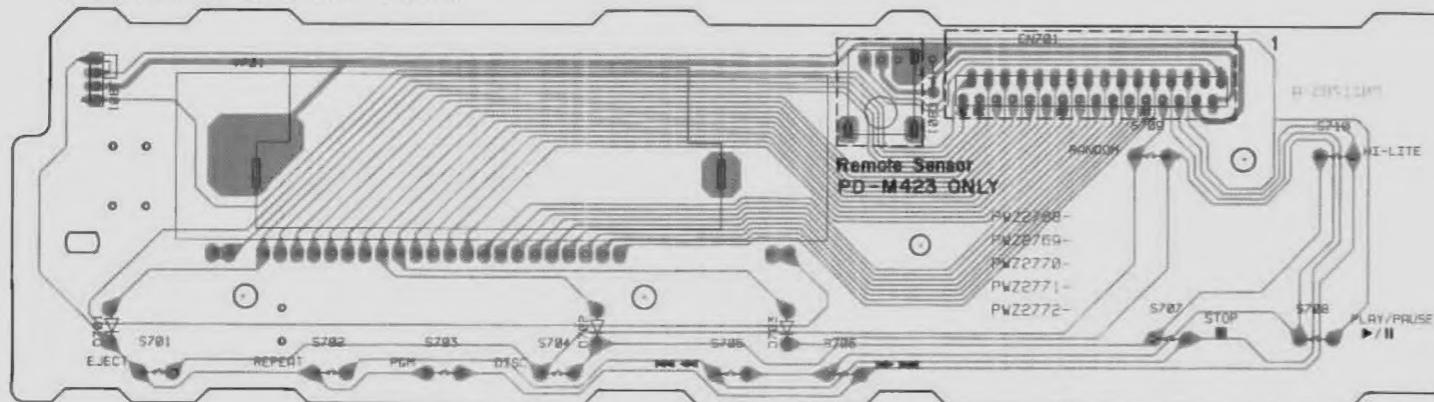

- Part numbers in PCB diagrams match those in the schematic diagrams.
 - A comparison between the main parts of PCB and schematic diagrams is shown below.

Symbol in PCB Diagrams	Symbol in Schematic Diagrams	Part Name
	 	Transistor
	 	Transistor with resistor
	 	Field effect transistor
		Resistor array
		3-terminal regulator
